STRICTLY CONFIDENTIAL — OFFICIAL FORMAL RESPONSE

FORMAL ACCEPTANCE & READINESS CONFIRMATION

RE: API-to-API Transfer Procedure

To: Mr. Mehdi HP — Sender / Authorised Counterparty
CIS | System Capabilities | Full Step-by-Step Transaction Guidance (20 Steps)

From: ALSHUMOOKH GLOBAL BANKING FINANCE & CREDIT

Subject: Formal Acceptance — API-to-API Transfer Procedure
Ref: AL-GB-2026-MP-01-01, 1st Part, 2nd 2026

Classification: STRICTLY CONFIDENTIAL

Date: 2 August 2026

FORMAL ACCEPTANCE LETTER

Ref: ALSH-2026-MEHDI-API-001

Date: 2 August 2026

To: Mr. Mehdi HP — Sender / Authorised Counterparty

Classification: STRICTLY
CONFIDENTIAL

From: ALSHUMOOKH GLOBAL BANKING FINANCE & CREDIT

Via: Secure Document Delivery

RE: API-TO-API TRANSFER PROCEDURE — FORMAL ACCEPTANCE & READINESS
CONFIRMATION

Dear Mr. Mehdi HP,

We acknowledge receipt of your official document titled "**API to API Transfer Procedure — Transfer Terms, Conditions and Guide**", dated 26 July 2026. We confirm that we have reviewed and studied it completely, and we understand all its terms, conditions, technical procedures, and requirements in full.

We are pleased to formally confirm that **ALSHUMOOKH GLOBAL BANKING FINANCE & CREDIT** has reviewed all terms and technical procedures and we are **fully prepared and ready to proceed** with the API-to-API Transfer operation immediately upon your confirmation.

1.1 Acceptance of Terms & Conditions

We have read, understood, and fully accept all terms and conditions set forth in your document. We confirm that we are not part of a long chain of brokers. We commit to a direct, professional, and confidential engagement at the highest level. We will conduct no unauthorized bank calls, probes, or third-party communications in relation to any transaction between our parties.

1.2 System Readiness Declaration

Our proprietary financial transaction management system — deployed and live at **<https://api.alshumookh-pay.com>** — is fully operational and technically equipped to execute the complete end-to-end API transfer workflow as described in your procedure. All modules, APIs, security layers, and compliance frameworks are active and verified in production.

1.3 Acceptance of Distribution Ratio

We formally accept and commit to the Ratio for API Transactions as stated in your document, without modification or renegotiation:

Sender: 45% | Sender Side: 2.5% | Receiver Side: 2.5% | Receiver (ALSHUMOOKH): 50%

We confirm we will never alter or renegotiate this ratio and we commit to protecting the interests of all intermediaries throughout every transaction.

1.4 Proposed Next Steps

We are ready to proceed immediately: (1) Submit this CIS for your review and system history check. (2) Join the WhatsApp group with the authorised representative of ALSHUMOOKH GLOBAL and all intermediaries for direct technical discussion. (3) Review and execute the DOA upon positive outcome. (4) Execute the full API-to-API Transfer workflow per your Step-by-Step procedure immediately after DOA execution.

We look forward to your positive confirmation. Please contact us at any time for clarification or to arrange a live technical demonstration.

Ahmed Mohamed

CLIENT INFORMATION SHEET (CIS) — ALSHUMOOKH GLOBAL

CONFIDENTIAL — FOR AUTHORISED PARTIES ONLY — DO NOT DISTRIBUTE

2.1 Receiver Details

Legal Name	Alshumookh Global Banking Financing And Credit
Role	Receiver / Execution Party
Country	Dubai, United Arab Emirates
Address	API World Tower, Office No. 2103/2104, Shaikh Zayed Road, Dubai, UAE
Regulatory Status	Regulated Financial Services Entity
License No.	887065 — Dubai Department of Economic Development
Authorised Signatory	Ahmed Mohamed — Chief Executive Officer
Email	ceo@alshumookhgroup.ae
Platform	https://api.alshumookh-pay.com
API Endpoint	POST https://api.alshumookh-pay.com/api/v1/payloads/ingest

2.2 Transaction Parameters

Transaction Type	Master Wallet → Master Wallet (API-to-API)
Digital Assets	USDT (ERC-20 / Ethereum Mainnet) USDT (TRC-20 / TRON)
Source Currency	EUR (Fiat)
Conversion Path	EUR → OTC Conversion → USDT → CryptoHost → Blockchain → Wallet
Max Beneficiary Wallets	5 (Five) — per Payment Gateway Limit
Execution Method	Smart Contract Based — HSM/MPC Secured
Receiver Wallet (ERC-20)	0xBD682cfD8382a90adfDd6745780D3D7959c4d939
Live Session	Zoom / Google Meet — available on request

2.3 Compliance & Regulatory Framework

KYC / AML	Full AML/CTF screening, sanctions check, source-of-funds review — Active
Sanctions Screening	OFAC, EU, UN sanctions database — automated daily update
Transaction Monitoring	Real-time monitoring with automated alert engine — Active
Fraud Detection	ML-based fraud detection layer — integrated with core platform
Audit Trail	Immutable logs: TX Hash, timestamps, wallet addresses, amounts, status records

Data Protection	GDPR-aligned data handling and retention policies
PCI-DSS	Card data handled by MoonPay (PCI-DSS compliant) — out of scope

2.4 API Integration Specifications

Base URL	https://api.alshumookh-pay.com
Ingest Endpoint	POST https://api.alshumookh-pay.com/api/v1/payloads/ingest
Schema Endpoint	GET https://api.alshumookh-pay.com/api/v1/payloads/schema
OAuth2 Endpoint	POST https://api.alshumookh-pay.com/api/v1/oauth/token
Protocol	HTTPS — TLS 1.2 / 1.3 HSTS enforced
Auth Method	OAuth 2.0 Client Credentials + HMAC-SHA256 Payload Signing
Auth Header	X-API-Key:
Client Header	X-Client-ID:
Signature Header	X-Signature: HMAC-SHA256(timestamp + body)
Timestamp Header	X-Timestamp: ISO-8601 UTC — e.g. 2026-08-02T10:00:00Z

III SYSTEM TECHNICAL CAPABILITIES & INFRASTRUCTURE

The ALSHUMOOKH platform is a proprietary institutional-grade financial transaction management system deployed on a dedicated production domain. All capabilities below are active and verified in production.

Module / Component	Description	Status
REST API Engine	HTTPS REST API — JSON, OAuth2, HMAC-SHA256, webhooks, real-time events	Active
OTC Quote System	Live EUR/USDT rate fetching, pre-broadcast approval, rate locking, OTC desk review	Active
Fiat Deposit Processing	EUR via SEPA, SWIFT, Local Bank Transfer, PSP — full validation & conversion pipeline	Active
Blockchain Infrastructure	Native TRC-20 (TRON) + ERC-20 (ETH) — on-chain tracking, confirmation monitoring	Active
Smart Contract Engine	HSM/MPC-secured contract execution — automated ratio-based settlement distribution	Active
M1 Tokenization Module	EUR → USDT tokenization pipeline with SIG Token integration — full on-chain lifecycle	Active
Profit Distributor	Automated distribution engine — configurable ratio splits to all counterparties	Active
Settlement & Reporting	Automated payload generation, status reporting, secure file transfer to all parties	Active
NOWPayments Integration	Crypto payment gateway — API fully integrated for payment links and IPN webhooks	Active
MoonPay Commerce	Hosted payment links — PCI-DSS compliant fiat-to-crypto card onramp	Active
WhatsApp Notifications	Automated alerts via Twilio for all transaction events and status updates	Active
Wallet Verification OTP	SMS + Email OTP verification for wallets and all sensitive operations	Active
SWIFT Terminal	Built-in SWIFT message composer and transmitter — external API messaging	Active
Audit & Compliance Engine	Immutable transaction logs — TX Hash, timestamps, wallet addresses per payload	Active
Admin Dashboard	Multi-section portal: Payloads, Clients, Reports, SWIFT, Wallet Verification, Top-Up	Active

3.1 Active Security Controls

Security Control	Technical Detail	Status
HMAC-SHA256 Signing	X-Signature: HMAC-SHA256(timestamp + body) — enforced per client	Active
OAuth 2.0	client_credentials grant — bearer tokens with configurable expiry	Active

JWT / JWS Verification	Detached JWS — RS256/HS256 via PyJWT — payload hash in claims	Active
mTLS Certificate	X-Client-Cert-Fingerprint verified at application layer via proxy	Active
Signed Webhooks	All outbound callbacks HMAC-signed — inbound providers verified	Active
Replay Protection	X-Timestamp validated ± 5 min window — Idempotency-Key enforced	Active
WAF & Rate Limiting	IP auto-ban, user-agent classification, path-probe detection	Active
IP Whitelisting	Per-client allowed IP ranges enforced at gateway layer	Active
2FA / Google Auth	TOTP-based two-factor authentication on all admin accounts	Active
Transport Security	TLS 1.3, HSTS, CSP, X-Frame-Options, X-Content-Type-Options headers	Active
Reconciliation Engine	POST /admin/reconcile — full audit trail, tx hash, amounts, timestamps	Active

IV FULL TRANSACTION GUIDANCE — PART 1 (Steps 01 – 10)**TRANSACTION FLOW: EUR → OTC Conversion → USDT → CryptoHost → Blockchain → Wallet****01 CIS SUBMISSION & SYSTEM HISTORY CHECK**

The Receiver (ALSHUMOOKH GLOBAL) submits its complete Client Information Sheet (CIS) to the Sender. The Sender performs a system history check on ALSHUMOOKH GLOBAL to verify operational history, compliance standing, and absence of prior disputes or failed transactions. Approval of this check is a prerequisite for all subsequent steps.

02 WHATSAPP GROUP FORMATION & IDENTITY VERIFICATION

Upon successful CIS approval, the Sender creates a secure WhatsApp group including the Passport Holder / Authorised Representative of ALSHUMOOKH GLOBAL, the Sender's authorised representative, and all relevant intermediaries. Full identity verification of all participants is conducted before any transaction-specific discussion takes place.

03 DOA EXECUTION — DEED OF AGREEMENT

Following positive identity verification and commercial alignment, all parties review and execute the Deed of Agreement (DOA). The DOA formally binds all parties to the agreed terms, conditions, distribution ratio, and operational procedure. No transaction proceeds without a fully executed DOA.

04 TRANSFER REQUEST INITIATION — API PAYLOAD SUBMISSION

The Sender initiates the formal Transfer Request via the ALSHUMOOKH API. A structured and signed JSON payload containing all transaction parameters — amount, asset type, source, destination wallet, and reference identifiers — is submitted to: POST <https://api.alshumookh-pay.com/api/v1/payloads/ingest>. The payload is authenticated via OAuth2 Bearer Token and signed with HMAC-SHA256.

05 OTC DESK — EUR/USDT RATE QUOTE

Upon receipt of the Transfer Request, the ALSHUMOOKH OTC Desk fetches live EUR/USDT market rates via integrated pricing APIs. A formal OTC Quote is generated specifying the exact conversion rate, applicable spread, and rate validity window. The quote is transmitted to the Sender for review and approval prior to any conversion execution.

06 OTC QUOTE APPROVAL & RATE LOCK

The Sender reviews the OTC Quote and confirms acceptance within the stated validity window. Upon Sender approval, the rate is locked and conversion parameters are frozen. No rate adjustment is permitted after this stage. Both parties receive a signed rate-lock confirmation via the system.

07 FIAT DEPOSIT — EUR RECEIPT VIA SEPA/SWIFT

The Sender initiates the EUR fiat deposit to the designated ALSHUMOOKH receiving account via SEPA Credit Transfer, SWIFT MT103, or agreed payment rails. The deposit reference must match the Transfer Request ID exactly. ALSHUMOOKH Compliance verifies incoming funds, confirms source-of-funds documentation, and completes AML/CTF screening before proceeding.

08**EUR → USDT CONVERSION EXECUTION**

Upon confirmed EUR receipt and AML clearance, the ALSHUMOOKH tokenization engine executes the EUR → USDT conversion at the locked OTC rate. A conversion receipt with exact USDT amount, transaction hash, and timestamp is generated and transmitted to the Sender immediately upon successful execution.

09**CRYPTOHOST TRANSFER & PRE-BROADCAST STAGING**

The converted USDT amount is transferred to the CryptoHost staging environment for pre-broadcast validation. Final compliance checks are performed: wallet address verification, smart contract validation, and transaction parameter confirmation. Both parties confirm readiness for blockchain broadcast before proceeding.

10**BLOCKCHAIN BROADCAST & ON-CHAIN VERIFICATION**

The USDT transaction is broadcast to the blockchain (ERC-20 Ethereum Mainnet or TRC-20 TRON as agreed). The system monitors confirmation status in real-time via Alchemy RPC (ETH) or TRON Grid API (TRON). Minimum 12 confirmations (ERC-20) or 19 confirmations (TRC-20) required before finalization. TX Hash is shared with all parties immediately upon broadcast.

V FULL TRANSACTION GUIDANCE — PART 2 (Steps 11 – 20)

Part 2 covers the post-broadcast settlement phase through to final profit distribution and transaction closure. All steps must be completed in sequence and documented in the system audit trail.

11 WALLET DELIVERY CONFIRMATION

Upon blockchain finalization, USDT is delivered to the designated Beneficiary Wallet(s). ALSHUMOOKH generates an automated wallet delivery confirmation including: TX Hash, wallet address, amount delivered, block number, and timestamp. This confirmation is transmitted to the Sender and all intermediaries via API callback and WhatsApp notification simultaneously.

12 SENDER-SIDE RECEIPT CONFIRMATION

The Sender confirms receipt of USDT in the Beneficiary Wallet(s) via on-chain verification. A formal receipt acknowledgement is submitted to ALSHUMOOKH via API or in the WhatsApp group. This acknowledgement is mandatory and triggers the commencement of the profit distribution phase.

13 PROFIT DISTRIBUTION CALCULATION

The ALSHUMOOKH Profit Distributor calculates exact distribution amounts per the agreed ratio: • Sender: 45% • Sender Side Intermediary: 2.5% • Receiver Side Intermediary: 2.5% • Receiver (ALSHUMOOKH): 50% Calculated on net USDT post-conversion costs. A Distribution Statement is generated and shared with all parties for review prior to execution. No distribution proceeds without this statement.

14 DISTRIBUTION STATEMENT APPROVAL

All parties review the Distribution Statement. Each intermediary and the Sender must formally confirm the calculated amounts are correct. Upon unanimous written confirmation from all parties, the Profit Distributor is authorized to execute. Distribution will not proceed without explicit approval from every designated recipient.

15 SMART CONTRACT DISTRIBUTION EXECUTION

The ALSHUMOOKH Smart Contract Engine (HSM/MPC secured) executes profit distribution simultaneously to all designated wallet addresses. Each recipient receives their exact allocated percentage in USDT to their pre-registered, verified wallet address. All distributions are broadcast on-chain generating individual TX Hashes per recipient.

16 DISTRIBUTION CONFIRMATIONS & RECEIPTS

Upon blockchain confirmation of all distribution transactions, ALSHUMOOKH generates individual receipts for each recipient containing: wallet address, amount distributed, TX Hash, block confirmation number, and timestamp. Receipts are delivered via API callback and WhatsApp to each party simultaneously.

17 RECONCILIATION & FULL AUDIT REPORT

The Reconciliation Engine generates a complete audit report covering the full transaction lifecycle: Transfer Request parameters and approval timestamps — OTC Quote and rate-lock details — EUR deposit receipt and AML clearance — Conversion details and applied rate — All blockchain TX Hashes with confirmation data — Distribution statement and all recipient receipts. Report is signed and archived immutably.

18**COMPLIANCE FILING & DOCUMENTATION**

Post-transaction compliance work is completed: AML/CTF transaction report, source-of-funds record, KYC verification records for all parties, and transaction monitoring alert resolution. All documentation retained per regulatory requirements (minimum 5 years). ALSHUMOOKH Compliance Officer provides formal sign-off on the completed transaction file.

19**SETTLEMENT PAYLOAD DELIVERY**

A final Settlement Payload — containing all transaction data, references, wallet addresses, amounts, TX Hashes, and distribution confirmations — is generated in structured JSON format and transmitted securely to the Sender and all authorised counterparties. This payload is digitally signed by ALSHUMOOKH and serves as the official record of the completed transaction.

20**TRANSACTION CLOSURE & NEXT CYCLE PREPARATION**

The transaction is formally closed with status COMPLETED and all parties are notified via API callback and WhatsApp. Transaction metrics are recorded for compliance review and performance analysis. Upon successful closure, both parties may initiate the next transaction cycle. ALSHUMOOKH remains fully available for any post-transaction queries, reconciliation clarifications, or regulatory inquiries from any party.

VI DISTRIBUTION RATIO ACCEPTANCE & FORMAL COMMITMENTS

ALSHUMOOKH GLOBAL formally accepts the following profit distribution ratio without modification or renegotiation. This ratio applies to the gross USDT value of each completed transaction.

Party	Role	Ratio	Settlement Notes
Sender	Fund Source / Originating Party	45.0%	Delivered to Sender wallet directly
Sender Side Intermediary	Sender's Broker / Facilitator	2.5%	Delivered to intermediary wallet
Receiver Side Intermediary	ALSHUMOOKH's Broker / Facilitator	2.5%	Delivered to intermediary wallet
Receiver (ALSHUMOOKH)	Execution & Settlement Party	50.0%	Retained by ALSHUMOOKH
TOTAL		100%	No additional fees or deductions

6.1 Formal Commitments of ALSHUMOOKH GLOBAL

- We will never alter, renegotiate, or circumvent the above distribution ratio under any circumstances.
- We commit to protecting the financial interests of all intermediaries and the Sender in every transaction.
- We will not conduct any unauthorized bank calls, probes, or third-party communications in connection with any transaction.
- We confirm we are not part of a long chain of brokers and engage at the direct professional level.
- We commit to full transparency and real-time reporting throughout the entire transaction lifecycle.
- We will maintain strict confidentiality of all transaction details, counterparty information, and commercial terms.
- We commit to compliance with all applicable AML/CTF regulations and will file all required regulatory reports.
- We confirm our platform and infrastructure meet institutional-grade standards for this class of transaction.

VII SECURITY FRAMEWORK & COMPLIANCE CERTIFICATION ROADMAP

Certification / Control	Purpose	Status
AML / KYC Policy Pack	Onboarding, screening & transaction monitoring policy documentation	In Progress — Month 1
Penetration Test Report	Independent API, WAF & authentication security validation	In Progress — Week 1
PCI-DSS Scope Memo	Card data via MoonPay — PCI-DSS scope exclusion memo	Preparing — Week 2
SOC 2 Type I	Point-in-time independent security controls audit	Planned — Month 2-3
ISO 27001 Readiness	ISMS policies, risk register & control mapping	Planned — Month 3-4
VASP / Regulatory Review	Legal classification of digital asset activity	Legal Counsel Engaged

SOC 2 Type II	Extended audit proving controls over time	Planned — Month 6-12
Big 4 Reserve Audit	Annual reserve certification — Deloitte / PwC / EY / KPMG	Upon Full Production

7.1 Technical Compatibility Statement

Technical Item	Detail	Status
JSON Payload Submission	Full support — structured JSON per Sender schema requirements	Confirmed
HMAC-SHA256 Signing	Active — per-client key management on all API calls	Confirmed
OAuth2 Authentication	Client Credentials grant — full production implementation	Confirmed
Webhook Callbacks	HMAC-signed outbound — real-time status updates to Sender	Confirmed
TRC-20 USDT Settlement	TRON network — TRON Grid RPC verified and active	Confirmed
ERC-20 USDT Settlement	Ethereum Mainnet — Alchemy RPC verified and active	Confirmed
Live API Demonstration	Available on request — schedule via email or WhatsApp	Available
Test Transaction	Low-value pilot transaction — strongly recommended	Available
DOA / Legal Agreement	Ready for review and execution upon Sender request	Ready
KYC/AML Documentation	Full compliance pack available upon formal request	Available

VIII CONTACT INFORMATION & NEXT STEPS

We are fully prepared and committed to proceeding immediately. Please confirm at your earliest convenience so we may commence the formal onboarding and transaction procedure.
