

# DUE DILIGENCE REPORT

Counterparty Review: Silk Route Healthcare Ltd

Prepared by: Compliance & Risk Division

Report Reference: DD-SRH-2026-08-12

Classification: CONFIDENTIAL

Date: August 12, 2026

## ■ WARNING — ASSESSMENT VERDICT

Based on comprehensive technical and financial analysis of eight (8) submitted documents, the Compliance & Risk Division concludes that all documentation provided by **Silk Route Healthcare Ltd** constitutes **fabricated, fraudulent material** with no verifiable basis in any legitimate blockchain, banking, or settlement network. The purported USD 500,000,000 transfer does not exist.

| Documents Reviewed | Verified on Blockchain | Verifiable Entities | Fraud Indicators | Risk Rating |
|--------------------|------------------------|---------------------|------------------|-------------|
| 8                  | 0 / 8                  | 0 / 3               | 14               | CRITICAL    |

# 1. Executive Summary

The Compliance & Risk Division received eight (8) PDF documents from a party identifying itself as **Silk Route Healthcare Ltd**, claiming to initiate a USD 500,000,000 settlement transfer via a combined SWIFT GPI / Ethereum ERC-4337 protocol, intermediated by an entity named 'BLOX Global Decentralized Settlement.'

Every document was subjected to blockchain verification, SWIFT network validation, corporate registry checks, and cryptographic analysis. **No element of the submitted documentation could be independently verified.** All eight documents are assessed as fabricated.

|                    |                                    |
|--------------------|------------------------------------|
| Report Date        | August 12, 2026                    |
| Reference No.      | DD-SRH-2026-08-12                  |
| Subject Entity     | Silk Route Healthcare Ltd          |
| Claimed Amount     | USD 500,000,000.00                 |
| Claimed Channel    | SWIFT GPI + ERC-4337 + BLOX Global |
| Documents Reviewed | 8 PDF files                        |
| Overall Risk       | CRITICAL — Confirmed Fraud Pattern |
| Recommendation     | Cease all engagement immediately   |

# 2. Document Inventory

The following eight documents were submitted and form the basis of this due diligence review:

| 1 | Execution Receipt — Confirmed              | Silk Route Healthcare Ltd | NO |
|---|--------------------------------------------|---------------------------|----|
| 2 | JSON-RPC Payload Execution                 | BLOX Global / HSBC-SBLC   | NO |
| 3 | Blockchain Confirmation Record             | BLOX Global / Ethereum    | NO |
| 4 | Network Clearance Document (SRH Secure)    | BLOX Global               | NO |
| 5 | Official Clearance & Settlement License    | BLOX Global Decentralized | NO |
| 6 | Multi-Stage Clearance Confirmation         | Silk Route Healthcare Ltd | NO |
| 7 | Cryptographic Signature Wallet             | BLOX Global               | NO |
| 8 | Comprehensive Verification Documents (3pp) | Silk Route Healthcare Ltd | NO |

*Note: All eight documents share reference code PNS-HSBC-SBLC3.9B-202605-7 and were generated by the same PDF tool — indicating a coordinated single-source fabrication.*

3. Claimed Transaction Details

|                      |                                                                    |
|----------------------|--------------------------------------------------------------------|
| Transfer Amount      | USD 500,000,000.00                                                 |
| Transaction Ref.     | PNS-HSBC-SBLC3.9B-202605-7                                         |
| Execution Date       | July 30 – August 1, 2026                                           |
| Ordering Institution | HSBC / First Bank, New York (BIC: FBOLUS6L)                        |
| Beneficiary          | Silk Route Healthcare Ltd                                          |
| Settlement Channel   | BLOX Global / Decentralized Settlement                             |
| Blockchain Network   | Ethereum Mainnet — ERC-4337 Account Abstraction                    |
| TX Hash (claimed)    | 0x9f8c6d4a3b2e1f0a7c8d9e0f1a2b3c4d5e6f7a8b9c0d1e2f3a4b5c6d7e8f9a0b |
| Block Number         | 19,058,221 (claimed: 12 confirmations)                             |
| Smart Account        | 0x0d1d2cbba910ca89a016117ddf54d72916872916                         |
| EntryPoint v0.6      | 0x5FF137D4b0FDCD49DcA30c7CF57E578a026d2789                         |
| EntryPoint v0.7      | 0x0000000071727De2219f5b088Af8dacbf6f37ca83                        |
| Relay API            | https://treasury.blox.global/api/relay/userop                      |
| SWIFT Message Type   | MT999 PRE-ADVICE / ISO 20022 MX                                    |
| UETR                 | e670e06b-3c19-4e5c-b7cd-ef91f72a37a5                               |
| Gas Fee              | 0.00041 ETH (14.5 Gwei)                                            |

## 4. Technical Fraud Analysis

### 4.1 Blockchain Verification

The transaction hash and block number cited across all documents were checked against the Ethereum Mainnet public ledger (Etherscan, Blockscout):

|        |                                                                                                                                                                                                                                                             |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FAILED | <b>Transaction Hash Not Found on Any Ethereum Network</b><br><br>Hash 0x9f8c6d4a3b2e1f0a7c8d9e0f1a2b3c4d5e6f7a8b9c0d1e2f3a4b5c6d7e8f9a0b returns no result on Etherscan, Blockscout, or any Ethereum RPC endpoint. The transaction does not exist on-chain. |
| FAILED | <b>Hash Pattern Is Artificially Constructed</b><br><br>The hash follows a sequential byte pattern (1a2b3c4d5e6f...) characteristic of manually typed strings. Cryptographically generated Ethereum transaction hashes never exhibit this pattern.           |
| FAILED | <b>Block Number / Timestamp Inconsistency</b><br><br>Ethereum block 19,058,221 was mined in March 2024 — not July/August 2026 as claimed. Applying a 2026 timestamp to a 2024 block is a verifiable, disqualifying inconsistency.                           |
| FAILED | <b>Smart Account Has No Relevant Transaction History</b><br><br>Address 0x0d1d2cbba910ca89a016117ddf54d72916872916 shows no deployment or activity consistent with a USD 500,000,000 settlement operation on Ethereum Mainnet.                              |
| FAILED | <b>Gas Fee Insufficient for Claimed Operation</b><br><br>0.00041 ETH (14.5 Gwei) is the cost of a routine token transfer, not a complex ERC-4337 UserOperation for a \$500M settlement. The gas figure is inconsistent with the claimed transaction type.   |

### 4.2 SWIFT / Banking Protocol Analysis

Each banking identifier and protocol claim was reviewed against published SWIFT standards:

|         |                                                                                                                                                                                                                                                                                                |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MISUSED | <b>BIC FBOLUS6L — Identity Spoofing</b><br><br>FBOLUS6L is a real BIC (First Bank, New York). No MT999 pre-advice or SWIFT GPI transaction with reference PNS-HSBC-SBLC3.9B-202605-7 is traceable. Placing a legitimate BIC on fraudulent documents is a standard identity-spoofing technique. |
| FAILED  | <b>UETR Not Traceable in SWIFT GPI Tracker</b><br><br>UETR e670e06b-3c19-4e5c-b7cd-ef91f72a37a5 returns no result in any SWIFT GPI Tracker query. All live SWIFTgpi payments generate tracker URLs verifiable by both parties' correspondent banks.                                            |

|         |                                                                                                                                                                                                                                                                                                               |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INVALID | <b>MT999 Cannot Confirm or Settle Payments</b><br><br>MT999 is a free-format SWIFT message with no formal payment instruction capability. It cannot initiate, confirm, or settle a USD 500M transfer. MT999 is a hallmark of SBLC advance fee fraud — used as a fake pre-advice to simulate bank involvement. |
| INVALID | <b>ISO 20022 + ERC-4337 Combination Is Technically Impossible</b><br><br>ISO 20022 (SWIFT MX) and Ethereum ERC-4337 are entirely separate, incompatible protocol stacks. No regulated institution routes ISO 20022 messages through an Ethereum smart contract relay.                                         |
| FAILED  | <b>SBLC Reference Unverifiable</b><br><br>The designation 'SBLC3.9B' implies a Standby Letter of Credit of USD 3.9 billion. No instrument of this scale under this reference exists in any verifiable ICC, BBA, or banking registry.                                                                          |

4.3 Entity Verification

Three entities are named across the submitted documentation. Each was checked against public corporate registries and regulatory databases:

| Silk Route Healthcare Ltd            | Beneficiary / Transferor | Not found as an active licensed financial institution in UK or Ireland                           | UNVERIFIED     |
|--------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------|----------------|
| BLOX Global Decentralized Settlement | Settlement Intermediary  | No registration with FCA, SEC, DFSA, CBUAE or any equivalent authority. Domain treasury.         | DOES NOT EXIST |
| HSBC / First Bank Treasury           | Ordering Institution     | HSBC is a legitimate global bank. Unauthorised use of its name to fabricate documents confirmed. | NAME NOT USED  |

5. Document-by-Document Analysis

DOC 1 — Execution Receipt — Confirmed

|                |                                                |
|----------------|------------------------------------------------|
| Claimed Amount | USD 500,000,000.00                             |
| Status Badge   | SUCCESS / CONFIRMED                            |
| Relay API      | https://treasury.blox.global/api/relay/usersop |
| Reference      | BLX-REL-20260807                               |

Professional-looking receipt with a green confirmation badge. The cited transaction hash does not exist on Ethereum Mainnet. The relay domain (treasury.blox.global) holds no financial licence. The deposit address fails standard EVM checksum validation. Document was created by a web-to-PDF generator, not any regulated institution.

DOC 2 — JSON-RPC Payload Execution

|            |                                            |
|------------|--------------------------------------------|
| DOC ID     | PNS-HSBC-SBLC3.9B-202605-7                 |
| Method     | eth_sendUserOperation                      |
| Request ID | DL-SRH-20260730                            |
| Sender     | 0x0d1d2cbba910ca89a016117ddf54d72916872916 |

A terminal-styled JSON-RPC payload. Although eth\_sendUserOperation is a real ERC-4337 method, this payload contains placeholder values (callData: '0x...', initCode: '0x') and fabricated gas figures. The request ID DL-SRH-20260730 is a narrative label, not a valid RPC identifier. No Ethereum bundler processed this operation.

DOC 3 — Blockchain Confirmation Record

|              |                                      |
|--------------|--------------------------------------|
| TX Hash      | 0x9f8c6d4a3b2e1f0a7c8d9e0f...        |
| Block        | 19,058,221                           |
| Network Node | BLOX_API_NODE JSON-RPC HEX BROADCAST |
| Timestamp    | 2026-08-01 10:30:45 UTC              |

Claims 12 block confirmations at block 19,058,221. This block was mined in March 2024 — making the stated 2026 timestamp technically impossible. BLOX\_API\_NODE is not a recognised Ethereum infrastructure provider. The transaction hash returns no result on any public Ethereum explorer.

DOC 4 — SRH Secure Clearance — Network Clearance Document

|                 |                    |
|-----------------|--------------------|
| Access Code     | AUTH-SRH-ERC4337   |
| Activation Code | ACT-MT999-PRE-ADV  |
| Blocking Code   | FBC-AES-256-GCM    |
| SWIFT Tracking  | SWIFT-GPI-TRACKING |

Presents multiple operational codes across three connected nodes (Blox Relay, Smart Account, HSBC Treasury). None of these codes correspond to any real SWIFT, Ethereum, or banking framework. This is a deliberate tactic: overwhelming the recipient with technical-sounding terminology to simulate legitimacy. The 'AUTHORIZED & SYNCED' stamp is a digital image, not a legal attestation.

DOC 5 — Official Clearance & Settlement License

|        |                                      |
|--------|--------------------------------------|
| Issuer | BLOX Global Decentralized Settlement |
| Amount | USD 500,000,000.00                   |
| UETR   | e670e06b-3c19-4e5c-b7cd-ef91f72a37a5 |
| Status | AUTHORIZED, CLEARED & SETTLED        |

BLOX Global Decentralized Settlement has no verifiable legal existence, no financial services registration in any jurisdiction, and no authority to issue settlement licences. The UETR is formatted as a valid UUID but is not traceable in any SWIFT GPI Tracker. The 'AUTHORIZED' rubber stamp is a decorative image element with no legal force.

DOC 6 — Multi-Stage Clearance Confirmation

|         |                                                   |
|---------|---------------------------------------------------|
| Stage 1 | SWIFT GPI INITIATION — AUTHORIZED (BIC: FBOLUS6L) |
| Stage 2 | ERC-4337 SYNCHRONIZATION — SYNCED                 |
| Stage 3 | ON-CHAIN SETTLEMENT — CLEARED (Block: 19,058,221) |

A three-stage audit trail designed to show a complete end-to-end process. The multi-stage format is a classic fraud device: by demonstrating 'all stages confirmed,' it creates urgency and implies only one final action is needed from the recipient to receive the funds. Not one of the three stages can be independently verified.

DOC 7 — Cryptographic Signature Wallet — Encrypted Keystore

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| Confirmation Code | WCC-BLOX-VERIFIED                                          |
| API Auth Key      | d5dac0de09db95dafcee90d3f64f9549812ca60be... (AES-256-GCM) |
| Encrypted Key     | U2FsdGVkX19/a7b8c9d0e1f2a3b4c5d6e7f8...                    |

The encrypted key prefix 'U2FsdGVkX19' is base64 for 'Salted\_\_' — a standard CryptoJS AES test vector, not a real blockchain wallet keystore. No legitimate institution shares private keys in a PDF document. This document likely functions as a lure to direct the recipient toward a fraudulent decryption portal.

DOC 8 — Comprehensive Verification Documents (3 pages)

|        |                                                                      |
|--------|----------------------------------------------------------------------|
| Page 1 | Settlement Certificate — OFFICIALLY VERIFIED, USD 500M               |
| Page 2 | SWIFT MT999 / ISO 20022 + API Gateway (API Key exposed in document)  |
| Page 3 | ERC-4337 Infrastructure + RPC Security + Encrypted Payload Broadcast |

A consolidated summary across three pages. Page 2 exposes the API endpoint <https://treasury.blox.global/api/relay> — indicating that the intended next step is to direct the recipient to this fraudulent server. Page 3 displays a terminal-styled 'Encrypted Payload Broadcast' with no cryptographic validity. The mined timestamp (2026-07-30 14:22:58) conflicts with block 19,058,221 which belongs to March 2024 — a definitive proof of fabrication.

## 6. Fraud Pattern Identification

The documentation is consistent with **SBLC / BG Monetization Advance Fee Fraud**, augmented with cryptocurrency terminology to appear technically credible. This pattern is documented by Interpol, FATF, and major financial regulators worldwide. Fourteen (14) specific indicators were identified:

|    |                                                                                                |
|----|------------------------------------------------------------------------------------------------|
| 1  | Unverifiable transaction hash with an artificial, sequential byte pattern                      |
| 2  | Block number / timestamp inconsistency — block 19,058,221 dates to March 2024, not August 2026 |
| 3  | Non-existent intermediary: 'BLOX Global Decentralized Settlement' has no legal registration    |
| 4  | Fraudulent use of a real banking identity: HSBC / First Bank (BIC: FBOLUS6L)                   |
| 5  | MT999 SWIFT message misused as a payment settlement and confirmation instrument                |
| 6  | Technically impossible protocol combination: ISO 20022 routed through Ethereum ERC-4337        |
| 7  | UETR e670e06b-3c19-4e5c-b7cd-ef91f72a37a5 returns no result in SWIFT GPI Tracker               |
| 8  | All 8 documents share an identical reference — a single coordinated fabrication campaign       |
| 9  | CryptoJS test vector ('U2FsdGVkX19') presented as a real encrypted blockchain private key      |
| 10 | All documents generated by the same web-to-PDF tool, confirming a single source                |
| 11 | Digital image stamps ('AUTHORIZED', 'CONFIRMED ON-CHAIN') presented as legal seals             |
| 12 | Disproportionately large claimed amount (USD 500M) deployed as a psychological lure            |
| 13 | Multi-stage confirmation format engineered to create urgency and a sense of near-completion    |
| 14 | Fraudulent API endpoint embedded within documents to redirect recipients to a malicious server |

## 7. Risk Assessment

|          |                |                                                                                                                                                                                            |
|----------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CRITICAL | Financial Loss | Any 'activation fee,' 'network clearance fee,' 'gas fee,' or similar payment made to progress this transaction will be stolen. No legitimate transfer will follow under any circumstances. |
|----------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|          |                           |                                                                                                                                                                                                                             |
|----------|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CRITICAL | System & Data Security    | Providing API keys, whitelisting the counterparty's IP address, or connecting internal systems to treasury.blox.global or any affiliated domain creates a direct attack surface for system intrusion and fund exfiltration. |
| HIGH     | Regulatory / AML Exposure | Processing funds linked to advance fee fraud — even inadvertently — may trigger mandatory AML/CTF reporting obligations and regulatory scrutiny from licensing authorities (DFSA, FinCEN, FCA, or equivalent).              |
| HIGH     | Reputational Damage       | Association with fraudulent entities may harm institutional standing with banking partners, correspondent banks, and institutional clients.                                                                                 |
| MEDIUM   | Legal Liability           | Depending on jurisdiction, inadvertent facilitation of fraud proceeds may create civil liability even in the absence of criminal intent.                                                                                    |

8. Recommendations

|            |                                   |                                                                                                                                                                                    |
|------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Immediate  | Cease All Communication           | Discontinue all contact with Silk Route Healthcare Ltd, BLOX Global, and any associated individuals or entities. Do not respond to further messages or document requests.          |
| Immediate  | Do Not Pay Any Fees               | Under no circumstances should any payment, deposit, or fee be remitted to any account, wallet, or address referenced by the counterparty, regardless of the justification offered. |
| Immediate  | Do Not Grant System Access        | Do not whitelist any IP address, issue any API credentials, or expose any internal endpoint or system to parties associated with this matter.                                      |
| Short-Term | Preserve All Evidence             | Retain all documents, correspondence, emails, and contact records in their original form for potential reporting to law enforcement or regulatory authorities.                     |
| Short-Term | File a Fraud Report               | Consider reporting to relevant authorities: UAE CBUAE, Interpol Financial Crimes unit, Action Fraud (UK), or FBI IC3 (if US-linked entities are involved).                         |
| Ongoing    | Strengthen Counterparty Screening | Implement mandatory blockchain transaction verification and corporate registry checks for all counterparties before any settlement engagement is initiated.                        |

9. Conclusion

Following exhaustive technical, financial, and corporate due diligence, the Compliance & Risk Division concludes with high confidence that:

|   |                                                                                                        |
|---|--------------------------------------------------------------------------------------------------------|
| 1 | The USD 500,000,000 transfer does not exist and has never been initiated on any legitimate network.    |
| 2 | All eight submitted documents are fabricated and were generated by a single web-based PDF tool.        |
| 3 | No associated entity — Silk Route Healthcare Ltd, BLOX Global — is a licensed financial institution.   |
| 4 | The scheme is consistent with SBLC/BG Monetization Advance Fee Fraud targeting financial institutions. |
| 5 | Any further engagement carries CRITICAL financial, regulatory, and reputational risk.                  |

|                     |                      |                       |
