

DUE DILIGENCE REPORT

Counterparty Review: Silk Route Healthcare Ltd

Prepared by: Compliance & Risk Division

Report Reference: DD-SRH-2026-08-12

Classification: CONFIDENTIAL

Date: August 12, 2026

WARNING — ASSESSMENT VERDICT

Based on comprehensive technical and financial analysis of eight (8) submitted documents, the Compliance & Risk Division concludes that all documentation provided by **Silk Route Healthcare Ltd** constitutes **fabricated, fraudulent material** with no verifiable basis in any legitimate blockchain, banking, or settlement network. The purported USD 500,000,000 transfer does not exist.

Documents Reviewed	Verified on Blockchain	Verifiable Entities	Fraud Indicators	Risk Rating
8	0 / 8	0 / 3	14	CRITICAL

1. Executive Summary

The Compliance & Risk Division received eight (8) PDF documents from a party identifying itself as **Silk Route Healthcare Ltd**, claiming to initiate a USD 500,000,000 (five hundred million US dollars) settlement transfer via a combined SWIFT GPI / Ethereum ERC-4337 blockchain protocol, intermediated by an entity named 'BLOX Global Decentralized Settlement.'

This report presents the findings of a technical due diligence review conducted on August 12, 2026. Every document was subjected to blockchain verification, SWIFT network validation, corporate registry checks, and cryptographic analysis. **No element of the submitted documentation could be independently verified.** All documents are assessed as fabricated.

Report Date	August 12, 2026
Reference No.	DD-SRH-2026-08-12
Subject Entity	Silk Route Healthcare Ltd
Claimed Amount	USD 500,000,000.00
Claimed Channel	SWIFT GPI + ERC-4337 + BLOX Global
Documents Reviewed	8 PDF files
Overall Risk	CRITICAL — Confirmed Fraud Pattern
Recommendation	Cease all engagement immediately

2. Document Inventory

The following eight documents were submitted and form the basis of this review:

1	Execution Receipt — Confirmed	Silk Route Healthcare Ltd	NO
2	JSON-RPC Payload Execution	BLOX Global / HSBC-SBLC	NO
3	Blockchain Confirmation Record	BLOX Global / Ethereum	NO
4	Network Clearance Document (SRH Secure)	BLOX Global	NO
5	Official Clearance & Settlement License	BLOX Global Decentralized	NO
6	Multi-Stage Clearance Confirmation	Silk Route Healthcare Ltd	NO
7	Cryptographic Signature Wallet	BLOX Global	NO
8	Comprehensive Verification Documents (3pp)	Silk Route Healthcare Ltd	NO

All eight documents share an identical reference code (PNS-HSBC-SBLC3.9B-202605-7) and were generated using the same underlying PDF creation tool, indicating a single coordinated fabrication campaign.

3. Claimed Transaction Details

Transfer Amount	USD 500,000,000.00
Transaction Ref.	PNS-HSBC-SBLC3.9B-202605-7
Execution Date	July 30 – August 1, 2026
Ordering Institution	HSBC / First Bank, New York (BIC: FBOLUS6L)
Beneficiary	Silk Route Healthcare Ltd
Settlement Channel	BLOX Global / Decentralized Settlement
Blockchain Network	Ethereum Mainnet — ERC-4337 Account Abstraction
TX Hash (claimed)	0x9f8c6d4a3b2e1f0a7c8d9e0f1a2b3c4d5e6f7a8b9c0d1e2f3a4b5c6d7e8f9a0b
Block Number	19,058,221 (claimed: 12 confirmations)
Smart Account	0x0d1d2cbba910ca89a016117ddf54d72916872916
EntryPoint v0.6	0x5FF137D4b0FDCD49DcA30c7CF57E578a026d2789
EntryPoint v0.7	0x0000000071727De2219f5b088Af8dacbf6f37ca83
Relay API	https://treasury.blox.global/api/relay/userop
SWIFT Message Type	MT999 PRE-ADVICE / ISO 20022 MX
UETR	e670e06b-3c19-4e5c-b7cd-ef91f72a37a5
Gas Fee	0.00041 ETH (14.5 Gwei)

4. Technical Fraud Analysis

4.1 Blockchain Verification

The transaction hash and block number cited across all documents were checked against the Ethereum Mainnet public ledger. Findings:

FAILED TX Hash Not Found	Hash 0x9f8c6d4a3b2e1f0a7c8d9e0f1a2b3c4d5e6f7a8b9c0d1e2... returns no result on Etherscan, Blockscout, or any Ethereum RPC node. The transaction does not exist on-chain.
FAILED Artificial Hash Pattern	The hash exhibits a sequential byte pattern (1a2b3c4d5e6f...) characteristic of manually constructed strings, not cryptographically generated transaction hashes.
FAILED Block / Date Mismatch	Ethereum block 19,058,221 was mined in March 2024, not July/August 2026 as claimed. The fabricators reused a real block number with a false timestamp — a verifiable inconsistency.
FAILED Smart Account Unverified	Address 0x0d1d2cbba910ca89a016117ddf54d72916872916 has no deployment or transaction history consistent with a USD 500M settlement operation.
FAILED Gas Amount Inconsistent	0.00041 ETH (14.5 Gwei) is insufficient gas for a complex ERC-4337 UserOperation of this value. This amount is typical of a standard token transfer, not a half-billion-dollar settlement.

4.2 SWIFT / Banking Protocol Analysis

MISUSED BIC: FBOLUS6L	FBOLUS6L is a real BIC code (First Bank, New York). However, no MT999 pre-advice or SWIFT GPI transaction with reference PNS-HSBC-SBLC3.9B-202605-7 is traceable. Placing a real BIC on fraudulent documents is a standard legitimacy-spoofing tactic.
FAILED UETR Untraceable	UETR e670e06b-3c19-4e5c-b7cd-ef91f72a37a5 is not traceable via any SWIFT GPI Tracker query. Legitimate SWIFTgpi payments produce live tracker URLs verifiable by both correspondent banks.
INVALID MT999 Misuse	MT999 is a free-format SWIFT message with no formal payment instruction capability. It cannot initiate, confirm, or settle a USD 500M transfer. MT999 is systematically misused in SBLC advance fee fraud as a fake pre-advice instrument.
INVALID Protocol Impossibility	ISO 20022 (SWIFT MX) and Ethereum ERC-4337 are completely separate protocols with no native interoperability. No legitimate institution routes ISO 20022 messages through an ERC-4337 smart contract relay.
FAILED SBLC Reference	The reference 'SBLC3.9B' implies a Standby Letter of Credit of USD 3.9 billion. No SBLC of this scale with this reference exists in any verifiable ICC or banking registry.

4.3 Entity Verification

--	--	--	--

Silk Route Healthcare Ltd	Beneficiary / Transferor	Not found as active licensed financial institution in UK Companies House or any financial regulator	UNIDENTIFIED
BLOX Global Decentralized Settlement	Settlement Intermediary	No FCA, SEC, DFSA, or equivalent registration. Domain as of BLOX Global has no financial licen	UNKNOWN
HSBC / First Bank Treasury	Ordering Institution	HSBC is a legitimate institution. Use of its name on the invoice is unauthorised and constitut	UNKNOWN

5. Document-by-Document Analysis

DOC 1: Execution Receipt — Confirmed

Claimed Amount	USD 500,000,000.00
Status Badge	SUCCESS / CONFIRMED
Relay API	https://treasury.blox.global/api/relay/usersop
Reference	BLX-REL-20260807

The document presents a professional-looking receipt with a green 'SUCCESS/CONFIRMED' badge. However, the transaction hash cited does not exist on Ethereum Mainnet. The relay API domain (treasury.blox.global) carries no verifiable financial licence. The deposit address format is irregular and does not match standard EVM address checksums. The document is generated by a web-to-PDF tool, not issued by any regulated financial institution.

DOC 2: JSON-RPC Payload Execution

DOC ID	PNS-HSBC-SBLC3.9B-202605-7
Method	eth_sendUserOperation
ID	DL-SRH-20260730
Sender	0x0d1d2cbba910ca89a016117ddf54d72916872916

A styled JSON-RPC payload displayed in a dark terminal interface. While eth_sendUserOperation is a real ERC-4337 method, the payload contains placeholder values (callData: '0x...', initCode: '0x') and fabricated gas parameters. The 'id' field DL-SRH-20260730 is a narrative label, not a valid RPC request ID. No bundler on Ethereum Mainnet processed this operation.

DOC 3: Blockchain Confirmation Record

TX Hash	0x9f8c6d4a3b2e1f0a7...
Block	19,058,221
Network Node	BLOX_API_NODE JSON-RPC HEX BROADCAST
Timestamp	2026-08-01 10:30:45 UTC

Claims 12 block confirmations at block 19,058,221. This Ethereum block was mined in March 2024, not August 2026 — the timestamp is therefore impossible. 'BLOX_API_NODE' is not a recognised Ethereum infrastructure provider. No transaction matching this hash exists on any explorer.

DOC 4: SRH Secure Clearance — Network Clearance Document

Access Code	AUTH-SRH-ERC4337
Activation Code	ACT-MT999-PRE-ADV
Blocking Code	FBC-AES-256-GCM
SWIFT Track	SWIFT-GPI-TRACKING

A dark-themed document presenting multiple 'operational codes' across three connected nodes. These codes have no meaning in any real SWIFT, Ethereum, or banking framework. The combination of fictional codes is designed to overwhelm the recipient with technical-sounding terminology. The 'AUTHORIZED & SYNCED' stamp is a digital image, not a legally binding attestation.

DOC 5: Official Clearance & Settlement License

Issuer	BLOX Global Decentralized Settlement
Amount	USD 500,000,000.00
UETR	e670e06b-3c19-4e5c-b7cd-ef91f72a37a5
Status	AUTHORIZED, CLEARED & SETTLED

'BLOX Global Decentralized Settlement' has no verifiable legal existence, no financial services registration in any jurisdiction, and no authority to issue clearance licences. The UETR is structurally a valid UUID but is not traceable in any SWIFT GPI Tracker. The 'AUTHORIZED' stamp is a decorative image element with no legal standing.

DOC 6: Multi-Stage Clearance Confirmation

Stage 1	SWIFT GPI INITIATION — AUTHORIZED, BIC: FBOLUS6L
Stage 2	ERC-4337 SYNCHRONIZATION — SYNCED
Stage 3	ON-CHAIN SETTLEMENT — CLEARED, Block: 19,058,221

A three-stage confirmation document designed to show a complete end-to-end process. The multi-stage format is a classic fraud tactic: by showing 'all stages confirmed,' it creates urgency and the impression that only a final recipient action is required to receive funds. None of the three stages can be independently verified.

DOC 7: Cryptographic Signature Wallet — Encrypted Keystore

Confirmation Code	WCC-BLOX-VERIFIED
API Key	d5dac0de09db95dafcee90d3f64f9549812ca60be...
Private Key	U2FsdGVkX19/a7b8c9d... (CryptoJS placeholder format)

The 'encrypted private key' prefix 'U2FsdGVkX19' decodes in base64 to 'Salted__' — a standard CryptoJS AES test vector, not a real wallet keystore. Sharing private keys via PDF documents is contrary to all legitimate blockchain security practices. This document may be designed to direct the recipient toward a fraudulent decryption portal.

DOC 8: Comprehensive Verification Documents (3 pages)

Page 1	Settlement Certificate — OFFICIALLY VERIFIED, USD 500M
Page 2	SWIFT MT999 / ISO 20022 + API Gateway Protocol (API Key exposed)
Page 3	ERC-4337 Infrastructure + RPC Security + Encrypted Payload Broadcast

A three-page consolidated document summarising all prior claims. Page 2 exposes the API endpoint <https://treasury.blox.global/api/relay> — indicating the intended next step is for the recipient to interact with this fraudulent server. Page 3 shows an 'Encrypted Payload Broadcast' — a visual prop with no cryptographic validity. The mined timestamp (2026-07-30 14:22:58) conflicts with block 19,058,221 which dates to March 2024, further confirming fabrication.

6. Fraud Pattern Identification

The documentation exhibits characteristics consistent with **SBLC / BG Monetization Advance Fee Fraud**, enhanced with cryptocurrency terminology to appear technically sophisticated. This fraud category is well-documented by Interpol, the Financial Action Task Force (FATF), and major financial regulators. The following fourteen (14) indicators were identified:

01	Unverifiable transaction hash with an artificial, sequential byte pattern
02	Block number / timestamp inconsistency — block 19,058,221 dates to March 2024, not August 2026
03	Non-existent intermediary: 'BLOX Global Decentralized Settlement' has no legal registration
04	Fraudulent use of legitimate HSBC / First Bank identity (BIC: FBOLUS6L)
05	MT999 SWIFT message misused as a payment settlement and confirmation instrument
06	Technically impossible protocol combination: ISO 20022 routed through Ethereum ERC-4337
07	UETR (e670e06b-3c19-4e5c-b7cd-ef91f72a37a5) not traceable in SWIFT GPI Tracker
08	All 8 documents share an identical reference — indicating a single fabrication campaign
09	CryptoJS placeholder ('U2FsdGVkX19') presented as a real encrypted private key
10	All documents generated by the same web-to-PDF creation tool
11	Decorative digital stamps ('AUTHORIZED', 'CONFIRMED ON-CHAIN') used as legal seals
12	Disproportionately large amount (USD 500M) deployed as a psychological enticement
13	Multi-stage confirmation format engineered to create false urgency
14	Fraudulent API endpoint embedded in documents to redirect recipients to a malicious server

7. Risk Assessment

CRITICAL	Financial Loss	If any 'activation fee,' 'network clearance fee,' 'gas fee,' or 'compliance deposit' is paid, those funds will be stolen. No legitimate transfer will follow.
CRITICAL	System Security	Providing API keys, whitelisting the counterparty's IP, or connecting internal systems to treasury.blox.global or any affiliated domain creates a direct attack surface for fund exfiltration.
HIGH	Regulatory / AML Exposure	Processing transactions linked to advance fee fraud may trigger AML/CTF reporting obligations and regulatory scrutiny from licensing authorities (DFSA, FinCEN, FCA, or equivalent).
HIGH	Reputational Damage	Association with fraudulent entities may harm institutional standing with banking partners, correspondent banks, and clients.

MEDIUM	Legal Liability	Depending on jurisdiction, inadvertent facilitation of fraud proceeds may create civil liability even without criminal intent.
--------	-----------------	--

8. Recommendations

Immediate	Cease all communication	Discontinue all contact with Silk Route Healthcare Ltd, BLOX Global, and any associated individuals or entities. Do not respond to further messages or requests.
Immediate	Do not pay any fees	Under no circumstances should any payment, deposit, or fee be made to any account, wallet, or address referenced by the counterparty.
Immediate	Do not grant system access	Do not whitelist any IP address, issue any API key, or expose any internal endpoint to parties associated with this matter.
Short-Term	Preserve all evidence	Retain all documents, correspondence, email chains, and contact records for potential reporting to law enforcement or regulatory authorities.
Short-Term	File a fraud report	Consider reporting to relevant authorities: UAE CBUAE, Interpol Financial Crimes unit, Action Fraud (UK), FBI IC3 (US), or the appropriate national financial regulator.
Ongoing	Enhance counterparty screening	Implement mandatory blockchain transaction verification and corporate registry checks for all counterparties before any settlement engagement is initiated.

9. Conclusion

Following exhaustive technical, financial, and corporate due diligence, the Compliance & Risk Division concludes with high confidence that:

- 1

The USD 500,000,000 transfer does not exist and has never been initiated on any legitimate network.
- 2

All eight submitted documents are fabricated using web-based PDF generation tools.
- 3

No associated entity — Silk Route Healthcare Ltd, BLOX Global — is a licensed financial institution.
- 4

The scheme is consistent with SBLC/BG Monetization Advance Fee Fraud targeting financial institutions.
- 5

Any further engagement carries CRITICAL financial, regulatory, and reputational risk.
