Re: Formal Clarification — No Transfer Received | Payment Order vs. Settlement

Dear Golden,

We wish to address your claims directly, factually, and on the record, in order to establish the correct legal and technical position and preserve all rights of ALSHUMOOKH Global Banking Finance & Credit.

1. What You Sent Was a Payment Order — Not a Settlement Transfer

- The file submitted was a JSON file accompanied by a video, both sent via WhatsApp. Neither was uploaded to or entered into our system in any way.
- What was submitted constitutes nothing more than a Payment Order — a preliminary instruction to initiate a process. It does not represent a completed financial transfer, a final transaction, or an executed settlement. It was handled solely on that basis.

2. We Returned Your File With Corrections Because It Was Incomplete

- Upon reviewing the original JSON file, we identified missing fields and structural errors. We corrected the file and returned it with the required amendments.
- This is standard procedure for a payment order that does not meet technical requirements. It does not constitute confirmation of funds received, execution of a settlement, or completion of any transfer.

3. You Were Provided Our Technical Workflow in Advance, and You Acknowledged It

- We previously shared our full operating methodology, including the technical mechanism and procedures of our system, and you acknowledged and agreed to proceed on that basis.
- However, the agreed technical steps were not followed on your end. Our requirements and procedures were clear from the outset — there is no ambiguity regarding the correct execution path required to complete any operation properly.

4. No File Was Uploaded and No Operation Was Processed Through Our System

- Our gateway logs every inbound payload, every API call, and every transaction attempt with full timestamps and IP records.
- We confirm with absolute certainty: no settlement upload, no fund flow, and no on-chain activity was ever received from your end. The file and video were received via WhatsApp only — outside the approved technical channel.

5. A Claim of \$25 Million Cannot Be Based on a JSON File Sent via WhatsApp

- It is not technically, logically, or legally possible to claim a loss of \$25 million based on a JSON file and a video sent via WhatsApp.
- A file of this type can be created with any chosen figure, as it does not represent a real financial transfer or final settlement.
- Claiming a \$25 million loss based solely on such materials is unacceptable and inconsistent with any recognized technical, banking, or legal standard. A genuine transfer is proven by a valid, verifiable Ethereum TX Hash — not by files or videos sent through messaging applications.

6. We Have Repeatedly Requested a Valid TX Hash — None Has Been Provided

- We have asked you multiple times, clearly and formally, to provide the Ethereum blockchain transaction hash corresponding to any claimed fund transfer.
- Any legitimate on-chain transfer of \$25 million USDT generates a publicly verifiable TX Hash within seconds. To date, no valid transaction hash has been provided. In the absence of a TX Hash, there is no technical or legal evidence that any transfer occurred.

7. There Is No "Uploaded Funds" Without an On-Chain Record

- Every USDT transaction on the Ethereum network is permanently recorded and publicly accessible. If \$25 million USDT was genuinely transferred, it exists on the blockchain and can be verified by anyone worldwide via Etherscan in seconds.
- We invite you to provide the TX Hash immediately so we can verify it in real time.

8. We Are Committed to Professional, Transparent, and Factual Engagement

- We affirm our commitment to professional, transparent engagement grounded in verifiable fact — free from claims unsupported by technical evidence.
- We are a licensed and regulated payment gateway operating under full technical and legal compliance. We will not accept liability for funds that have never reached us, or for claims based on an incomplete payment order never processed through our system.

ALSHUMOOKH bears absolutely no liability for any claimed amount relating to funds that have never arrived in our system — until a valid, verifiable Ethereum TX Hash is provided.

Yours faithfully,

ALSHUMOOKH Global Banking Finance & Credit
