FROM: ALSHUMOOKH GROUP — Technology & Compliance Division
SUBJECT: Official Technical Response & Platform Clarification — Agreement Ref. RICHFIELD/ALSH/2026

Dear Ms. Popova Milena Simeonova and the Management of Richfield Capital Resources Limited,

ALSHUMOOKH GLOBAL BANKING FINANCE & CREDIT — Technology & Compliance Division has carefully reviewed the Joint Venture Investment Agreement dated April 07, 2026, submitted by Richfield Capital Resources Limited (hereinafter 'Richfield' or 'Sender'). We appreciate the engagement and write this official response to address specific technical points within the Agreement that require clarification and correction in order to align with our platform's architecture and operational procedures.

SECTION 1 — CRITICAL TECHNICAL CLARIFICATION: PLATFORM ARCHITECTURE

IMPORTANT: ALSHUMOOKH operates a PRIVATE INSTITUTIONAL SERVER — NOT a Global Bank Server or Public Host.

The Agreement references a 'Bank Crypto Host System' connected to a global banking network. We must formally clarify that ALSHUMOOKH GROUP operates an entirely independent, privately-owned institutional-grade server infrastructure, hosted under our exclusive control and management. Our platform is NOT affiliated with, connected to, or dependent upon any global bank server, public banking host, interbank messaging network (SWIFT/SEPA), or any third-party financial institution's server infrastructure.

✗ Contract Assumption (INCORRECT)

- 'Bank Crypto Host System' (non-existent standard)
- Global Bank Server / Interbank Host
- Public shared infrastructure
- Bank-controlled IP validation & blocking codes

✓ ALSHUMOOKH Actual Architecture

- Private institutional REST API server
- Exclusively owned & controlled by ALSHUMOOKH
- TLS 1.3 encrypted / WAF-protected / IP-whitelisted
- Direct blockchain integration (ERC 20 / TRC 20)

SECTION 2 — SUPPORTED SETTLEMENT METHODS

ALSHUMOOKH GROUP supports two formally defined settlement pathways. Both are executed exclusively through our private API platform and require no connection to any external bank server or interbank host system. Detailed technical flow diagrams for each method are presented on the following pages.

METHOD A Master Wallet → Master Wallet (On-Chain Direct)

Sender's Master Wallet transfers USDT (ERC-20 or TRC-20) directly on-chain to ALSHUMOOKH's Receiver Master Wallet. Validated and tracked via our private API. Detailed diagram: Page 3.

METHOD B Fiat / API Payment Gateway

Sender submits a structured API payload triggering a fiat-to-crypto or crypto payment link. Processed through our private gateway. Settlement distributed per approved PGL. Diagram: Page 4.

SECTION 3 — TECHNICAL OBSERVATIONS ON THE AGREEMENT (ITEM BY ITEM)

The following table presents a clause-by-clause technical comparison between the procedures stated in the Agreement submitted by Richfield Capital Resources Limited and the actual operational parameters of the ALSHUMOOKH private platform.

Technical Item	Contract States	ALSHUMOOKH System	Compatible
Transfer Mechanism	'Bank Crypto Host System' connecting bank to blockchain	Private REST API over HTTPS — POST /api/v1/payloads/ingest — no bank host	X NO
Receiver Provides Password	Receiver obligated to provide PASSWORD and BENEFICIARY CODES to Sender	ALSHUMOOKH never shares passwords or internal credentials with any counterparty	X NO
IP Code Submission	Receiver provides IP Code to Sender for validation	Platform endpoint is public & fixed: api.alshumookh-pay.com — no IP code exchange	X NO
Server Slip / Transfer Codes	Sender provides FINAL CODE, BLOCKING CODE, RELEASE CODE, ACCESS CODE, SORT	Only valid input: on-chain TX Hash submitted via JSON payload — no proprietary codes	X NO
Bank Registers Wallets	'Bank Register Sender Wallets as Beneficiary Recipients'	Wallets registered via PGL (Paymaster Wallet List) on our private platform, not by any bank	X NO
Liquidity Release	'Liquidity Released by Processing Bank'	Liquidity is released by Smart Contract execution — no bank intermediary involved	X NO
Blockchain Notification	'Blockchain Sends Notice to Sender Banker'	Blockchain sends on-chain confirmation — no bank notification protocol exists in ERC-20/TRC-20	X NO
PGL Preparation	Receiver issues PGL per reinvestment agreement	PGL (max 5 wallets, 100% distributed) prepared by ALSHUMOOKH after on-chain	✓ YES
Live Execution Session	Not explicitly required	Mandatory live session (Zoom/Google Meet) required before smart contract execution	✓ YES
Settlement Currency	USDT ERC-20	USDT ERC-20 and USDT TRC-20 — both supported on our platform	✓ YES
On-Chain Confirmation	Final execution on Ethereum Mainnet ERC-20	On-chain TX hash recorded — settlement final & irreversible upon confirmation	✓ YES
Receiver KYC of Sender	Sender declares clean/clear funds	KYC/AML/CTF screening of Sender required before any API credential issuance	✓ YES

★ Items marked 'NO' require amendment in the Agreement before ALSHUMOOKH can proceed.

**SECTION 4 — METHOD A: MASTER WALLET → MASTER WALLET (ON-CHAIN DIRECT)**

In this method, the Sender transfers USDT directly on the blockchain (Ethereum ERC-20 or Tron TRC-20) from their Master Wallet to ALSHUMOOKH's designated Receiver Master Wallet. The transaction hash is then submitted to our private API for verification, recording, and PGL-based distribution. No bank server, no bank host, and no interbank codes are involved at any stage.

METHOD A — MASTER WALLET TO MASTER WALLET FLOW DIAGRAM**KEY TECHNICAL NOTES — METHOD A**

- No bank server, no interbank host, no blocking codes, no release codes are required.
- Sender provides only: Master Wallet Address + on-chain TX Hash via our API.
- All validation is performed by ALSHUMOOKH's private server — not by any bank.
- Ethereum ERC-20 wallet: 0xBD682cfD8382a90adfDd6745780D3D7959c4d939
- Tron TRC-20 wallet: Provided upon transaction initiation after KYC clearance.

SECTION 5 — METHOD B: FIAT / API PAYMENT GATEWAY

In Method B, the Sender (or their client) initiates a payment through ALSHUMOOKH's API payment gateway. The platform generates a secure payment link or direct crypto payment order. The Sender completes payment via the generated link (fiat-to-crypto or direct USDT). Upon on-chain confirmation, settlement is distributed automatically per the approved PGL. This method is fully managed by ALSHUMOOKH's private server and requires no connection to any bank host or interbank system.

METHOD B — FIAT / API PAYMENT GATEWAY FLOW DIAGRAM

KEY TECHNICAL NOTES — METHOD B

- Payment link generated by ALSHUMOOKH private server — no bank host or external system.
- Sender accesses payment page via secure HTTPS link — no bank credentials shared.
- Supports: Fiat payment, USDT ERC-20, USDT TRC-20.
- All distribution executed automatically per PGL upon on-chain confirmation.
- Full audit trail, compliance logs, and settlement report issued upon completion.

**SECTION 6 — REQUIRED AMENDMENTS TO THE AGREEMENT**

In order for ALSHUMOOKH GROUP to formally proceed, the Agreement submitted by Richfield Capital Resources Limited must be revised to reflect our actual platform architecture. The following amendments are required:

1. Remove all references to 'Bank Crypto Host System'. Replace with: 'ALSHUMOOKH Private API Platform (api.alshumookh-pay.com)'.
2. Remove Clause 2 requirement for Receiver to provide PASSWORD, IP CODE, and BENEFICIARY CODES. ALSHUMOOKH does not share platform credentials with any counterparty.
3. Remove Clause 5 references to FINAL CODE, INTERBANK BLOCKING CODE, RELEASE CODE, ACCESS CODE, SORT CODE. Replace with: 'on-chain transaction hash submitted via API payload.'
4. Replace 'Bank registers Sender wallets as Beneficiary Recipients' with: 'ALSHUMOOKH registers beneficiary wallets via PGL on its private platform.'
5. Replace 'Liquidity released by Processing Bank' with: 'Liquidity released by Smart Contract execution upon on-chain confirmation.'
6. Confirm selected settlement method: Method A (Master Wallet to Master Wallet) OR Method B (API Payment Gateway). Both are described in this document.
7. Sender must complete ALSHUMOOKH KYC/AML onboarding process prior to API credential issuance.

SECTION 7 — NEXT STEPS

- Richfield Capital to review and amend the Agreement per the requirements listed in Section 6 above.
- Submit revised Agreement to ALSHUMOOKH Compliance Division at: ceo@alshumookhgroup.ae
- Upon review and approval of the revised Agreement, ALSHUMOOKH will initiate the KYC/AML onboarding.
- API credentials (X-API-Key + X-Client-ID) will be issued to Richfield upon KYC clearance.
- Transaction to proceed per the approved method (A or B) as outlined in this document.

ALSHUMOOKH GROUP remains committed to engaging with Richfield Capital Resources Limited on a technically sound and legally compliant basis. We look forward to receiving the revised Agreement and proceeding through the formal onboarding process. Please do not hesitate to contact our Compliance Division for any clarifications.
