SIG TOKEN

SIG 1 LIQUIDITY PROVISION GUIDE

Step-by-Step Instructions for Adding Liquidity to the SIG / USDC Pool

TWO METHODS AVAILABLE

METHOD 1		METHOD 2
Uniswap Direct (Self-Service)		Send to Master Wallet (Managed by ALSIG)
You connect your wallet directly to Uniswap and add liquidity yourself		You send USDC to our master wallet and we add it on your behalf
<i>Best for: DeFi-experienced investors</i>	OR	<i>Best for: Hands-off investors</i>

✓ IMPORTANT: You do NOT need access to our system API or server. Both methods operate entirely through your own wallet or via sending funds to our verified master wallet address.

Issued: June 18, 2026 · Al Shumookh International Group · Dubai, UAE

METHOD 1 — UNISWAP DIRECT (SELF-SERVICE)

You add liquidity directly from your own wallet — no intermediary required

PREREQUISITES — What You Need Before Starting

■	MetaMask Wallet	Installed in your browser — download from metamask.io
■	USDC Balance	Any amount — this is one side of the liquidity pair
■	SIG Balance	Equal USD value to your USDC — must hold SIG tokens
■	ETH for Gas	Minimum \$10–20 worth of ETH on Ethereum mainnet
■	SIG Contract	[INSERT SIG CONTRACT ADDRESS — Etherscan verified]

STEP-BY-STEP INSTRUCTIONS

1	Open Uniswap Pool Page Go to: app.uniswap.org/#/add/v2 (Uniswap V2 — not V3) Make sure you are on Version 2 — look for "V2" in the URL or page header.
2	Connect Your Wallet Click the 'Connect Wallet' button in the top-right corner. Select MetaMask from the options. Approve the connection request in MetaMask. Ensure your wallet is on Ethereum Mainnet (not a test network).
3	Select First Token — USDC In the first token field, search for USDC and select it. USDC is available by default in the Uniswap token list.
4	Select Second Token — SIG In the second token field, click 'Select a token' . Paste the SIG contract address: [INSERT SIG CONTRACT ADDRESS] Click 'Import' and confirm you want to add this custom token. You will see a warning about unknown tokens — this is normal for new tokens.
5	Enter Your Amounts Type the amount of USDC you want to provide. Uniswap will automatically calculate the matching SIG amount based on the current pool price. Both sides must be added at the current pool ratio — you cannot change this.
6	Approve USDC Click 'Approve USDC' — this authorizes Uniswap to use your USDC. Confirm the approval transaction in MetaMask. Wait for the transaction to confirm on Ethereum (~30–60 seconds).
7	Approve SIG Click 'Approve SIG' — same process as USDC. Confirm the approval transaction in MetaMask. Wait for confirmation.

8

Click Supply

Once both approvals are confirmed, the **'Supply'** button becomes active.
Click **'Supply'** — a summary popup shows your amounts and estimated pool share.
Review the details carefully.

9

Confirm in MetaMask

MetaMask will open a transaction confirmation window.
Review the gas fee (ETH cost). Click **'Confirm'**.
Wait for the transaction to confirm — usually 1–3 minutes.

10

Receive LP Tokens

After confirmation, you will receive **UNI-V2 LP Tokens** in your wallet.
These tokens represent your share of the liquidity pool.
Keep them safe — you need them to withdraw your liquidity later.

■ To WITHDRAW your liquidity later: Go to app.uniswap.org/#/pool — connect wallet — find your SIG/USDC position — click 'Remove' — choose percentage to withdraw — confirm.

METHOD 2 — SEND TO MASTER WALLET (MANAGED)

You send USDC to ALSIG master wallet — we add liquidity on your behalf

HOW IT WORKS

You Send	ALSIG Receives	ALSIG Splits	ALSIG Adds to Pool	You Receive
USDC to Master Wallet	Confirms receipt and notifies you	50% USDC + 50% buys SIG	USDC + SIG added to Uniswap V2	Confirmation Report + LP Token record

MASTER WALLET DETAILS

Accepted Asset	USDC (USD Coin) — ERC-20 on Ethereum Mainnet
Network	Ethereum Mainnet ONLY — Do NOT send on BSC, Tron, or Polygon
Master Wallet Address	[INSERT ALSIG MASTER WALLET ADDRESS HERE]
Minimum Amount	\$500 USDC minimum per liquidity provision
Processing Time	Within 24 hours of confirmed receipt
Confirmation	You will receive a transaction report with Etherscan links

STEP-BY-STEP INSTRUCTIONS

1	Contact ALSIG Team Before sending any funds, contact the ALSIG team to confirm: • Your investment amount • Your Ethereum wallet address (to receive LP token record) • Preferred confirmation method (email or Telegram) We will provide you with the verified master wallet address.
2	Verify the Master Wallet Address ALWAYS verify the master wallet address directly with the ALSIG team via a secondary communication channel (not just email). Never send funds to an address provided only via email without phone/video confirmation.
3	Send USDC to Master Wallet Open your wallet (MetaMask, Coinbase, or any ERC-20 compatible wallet). Send your USDC amount to the provided master wallet address. Network: Ethereum Mainnet ONLY Asset: USDC (ERC-20) — NOT USDT, NOT ETH Save your transaction hash (TX Hash) after sending.
4	Send Confirmation to ALSIG After sending, contact the ALSIG team with: • Your TX Hash (transaction ID from your wallet) • Amount sent • Your Ethereum wallet address You can verify the transaction on: etherscan.io

5

ALSIG Processes Your Liquidity

Once confirmed, ALSIG will:

- Split your USDC 50/50 (half stays USDC, half is used to purchase SIG at current market price)
- Add both USDC + SIG to the Uniswap V2 USDC/SIG pool
- All transactions are public and verifiable on Etherscan

This process takes up to 24 hours.

6

Receive Confirmation Report

ALSIG will send you a detailed report including:

- Etherscan link to the liquidity addition transaction
- Amount of USDC and SIG added to the pool
- Your pool share percentage
- LP Token details

You can verify everything independently on Etherscan.

7

Withdrawing Your Liquidity

To withdraw your liquidity at any time, contact the ALSIG team with your withdrawal request.

ALSIG will remove your portion from the pool and return the equivalent value in USDC + SIG to your wallet.

Note: Due to price fluctuation, the returned amounts may differ from what was originally deposited (Impermanent Loss — explained below).

IMPORTANT NOTES — PLEASE READ BEFORE INVESTING

Understanding Impermanent Loss

What is it?	When you add liquidity to a pool, the ratio of tokens changes as people trade. If SIG price rises significantly, you may end up with less SIG and more USDC than you started with. The total value may be less than if you had just held both tokens separately.
Is it permanent?	No — it is only "realized" if you withdraw while prices are different. If SIG returns to its original price, the loss disappears. Trading fees earned by providing liquidity can also offset impermanent loss.
How to reduce it?	Provide liquidity for a longer period. Avoid withdrawing during extreme price movements. Only invest amounts you are comfortable holding long-term.

Security Rules — Protect Your Investment

■	NEVER share your wallet seed phrase or private key with anyone — including ALSIG team members.
■	ALWAYS verify the master wallet address through a second channel before sending funds.
■ ■	NEVER send funds to an address received only via email without phone verification.
■	ONLY use the official Uniswap website: app.uniswap.org — beware of fake phishing sites.
■	ALWAYS save your TX Hash after every transaction as proof of payment.
■	You can verify ALL transactions independently on etherscan.io at any time.

Method Comparison

	Method 1 — Uniswap Direct	Method 2 — Master Wallet
Technical Skill Required	Medium — need Web3 experience	None — we handle everything
Control of Funds	Full — you hold LP tokens	ALSIG manages on your behalf
Speed	Immediate — your own transaction	Within 24 hours of receipt
Minimum Amount	No minimum (gas fees apply)	\$500 USDC minimum
Verification	Instant on Etherscan	ALSIG sends full report
Best For	DeFi-experienced investors	Hands-off or first-time DeFi investors
Fees	Ethereum gas fees (~\$10–30)	No additional fees from ALSIG
