

SIG TOKEN

LIQUIDITY PROVISION GUIDE

Step-by-Step Instructions for Investors

METHOD 1		METHOD 2
Uniswap Direct	OR	Send to Master Wallet
You connect your own wallet to Uniswap and add liquidity yourself — full control		You send USDC to ALSIG master wallet — we add liquidity on your behalf
<i>For DeFi-experienced investors</i>		<i>For hands-off investors</i>

IMPORTANT

You do NOT need to share any API keys, server IP, or system access with anyone. Both methods work entirely through public blockchain infrastructure.

Issued by	Al Shumookh International Group — Dubai, UAE
Token	SIG (Al Shumookh International Group Token) · ERC-20 Ethereum
DEX Pool	Uniswap V2 · USDC / SIG
Document Date	June 18, 2026

METHOD 1 — UNISWAP DIRECT (SELF-SERVICE)

Add liquidity directly from your own wallet — no intermediary

What You Need Before Starting

MetaMask Wallet	Installed in your Chrome browser — download from metamask.io
USDC Balance	The amount you want to provide (e.g. \$1,000 USDC)
SIG Tokens	Equal USD value of SIG — you must hold SIG in your wallet
ETH for Gas Fees	Minimum \$15–20 worth of ETH on Ethereum Mainnet
SIG Contract Address	[INSERT VERIFIED SIG CONTRACT ADDRESS FROM ETHERSCAN]

Step-by-Step Instructions

1

Open Uniswap V2 Pool Page

- Open your browser and go to: app.uniswap.org/#/add/v2
- Important: Make sure it says V2 in the URL — not V3
- Do not use any other website — beware of phishing sites

2

Connect Your MetaMask Wallet

- Click the 'Connect Wallet' button in the top-right corner of Uniswap
- Select MetaMask from the list of wallet options
- A MetaMask popup will appear — click 'Connect' to approve
- Make sure your wallet is set to Ethereum Mainnet (not a test network)

3

Select the First Token — USDC

- Click on the first token selection field
- Type 'USDC' in the search box and select it from the list
- USDC is a standard token — it will appear automatically

4

Select the Second Token — SIG

- Click on the second token selection field
- Paste the SIG contract address: [INSERT SIG CONTRACT ADDRESS]
- A warning will appear saying 'Unknown Token' — this is normal for new tokens
- Read the warning and click 'Import' to confirm

5

Enter Your Amounts

- Type the amount of USDC you want to provide in the first field
- Uniswap will automatically calculate the required SIG amount
- The ratio is fixed by the current pool price — you cannot change it
- Example: if you enter \$1,000 USDC, Uniswap shows how much SIG is needed

6

Approve USDC

- Click the 'Approve USDC' button
- MetaMask will open a confirmation popup — click 'Confirm'
- Wait 30–60 seconds for the transaction to confirm on Ethereum
- You will see a green checkmark when the approval is complete

7

Approve SIG

- Click the 'Approve SIG' button
- Confirm in MetaMask as before
- Wait for the transaction to confirm

8

Click Supply and Review

- Once both approvals are done, the 'Supply' button becomes active
- Click 'Supply' — a summary popup appears showing your amounts
- Review carefully: token amounts, your pool share percentage, exchange rate
- If everything looks correct, click 'Confirm Supply'

9

Confirm the Transaction in MetaMask

- MetaMask opens — review the estimated gas fee (ETH cost)
- Click 'Confirm' to submit the transaction to the blockchain
- Wait 1–3 minutes for the transaction to be confirmed
- You can track the transaction at: etherscan.io

10

Receive Your LP Tokens — DONE

- After confirmation, UNI-V2 LP Tokens are deposited to your wallet
- These tokens represent your share of the USDC/SIG liquidity pool
- Keep them safe — you MUST have them to withdraw your liquidity later
- To check your position, go to: app.uniswap.org/#/pool

**TO
WITHDRAW
LATER**

Go to app.uniswap.org/#/pool → Connect wallet → Find your USDC/SIG position → Click 'Remove' → Choose percentage to withdraw → Confirm in MetaMask

METHOD 2 — SEND TO MASTER WALLET (MANAGED BY ALSIG)

Send USDC to our wallet — ALSIG adds liquidity on your behalf within 24 hours

How It Works — Overview

STEP	STEP	STEP	STEP	STEP
1 You send USDC	2 ALSIG confirms receipt	3 ALSIG splits: 50% USDC 50% buys SIG	4 ALSIG adds both to Uniswap V2	5 You receive confirmation report

Master Wallet Details

Accepted Asset	USDC (USD Coin) — ERC-20 standard only
Required Network	Ethereum Mainnet ONLY — Do NOT use BSC, Tron, Polygon, or any other network
Master Wallet Address	[INSERT ALSIG MASTER WALLET ADDRESS — verify directly with team]
Minimum Amount	\$500 USDC minimum per liquidity provision request
Processing Time	Within 24 hours of confirmed receipt
Confirmation Provided	Full report with Etherscan transaction links sent to your email

Step-by-Step Instructions

1

Contact ALSIG Team First — Before Sending Any Funds

- Email or message the ALSIG team to confirm your investment amount
- Provide your Ethereum wallet address (to receive your confirmation record)
- Request the verified master wallet address directly from the team
- We will confirm all details with you before you send anything

2

Verify the Master Wallet Address — Critical Security Step

- Always verify the master wallet address through TWO communication channels
- Example: confirm by email AND phone call before sending
- Never send funds based on an address received only by email
- If you have any doubt — contact the team again before proceeding

3

Send USDC to the Master Wallet

- Open your wallet (MetaMask, Coinbase Wallet, or any ERC-20 wallet)
- Send your USDC to the confirmed ALSIG master wallet address
- Network: Ethereum Mainnet ONLY
- Asset: USDC (ERC-20) — NOT USDT, NOT ETH, NOT any other token
- After sending, copy and save your Transaction Hash (TX Hash)

4

Send Confirmation to ALSIG Team

- Contact ALSIG immediately after sending with the following details:
- Your TX Hash (transaction ID from your wallet)
- Amount of USDC sent
- Your Ethereum wallet address
- You can also view your transaction at etherscan.io using your TX Hash

5

ALSIG Processes Your Liquidity

- ALSIG splits your USDC: 50% stays as USDC, 50% is used to purchase SIG
- Both USDC and SIG are added to the Uniswap V2 USDC/SIG pool
- All transactions are publicly verifiable on Etherscan
- Processing time: within 24 hours of receiving your confirmation

6

Receive Your Confirmation Report

- ALSIG sends you a full report containing:
- Etherscan link to the liquidity addition transaction
- Exact amounts of USDC and SIG added to the pool
- Your pool share percentage
- LP Token information and your position details

7

Withdrawing Your Liquidity (When Ready)

- Contact the ALSIG team at any time to request a withdrawal
- ALSIG will remove your share from the Uniswap pool
- You receive back equivalent value in USDC and SIG to your wallet
- Note: returned amounts may differ from original deposit due to price changes (see Important Notes)

IMPORTANT NOTES — READ BEFORE INVESTING

Understanding Impermanent Loss

What is it?	When token prices change after you add liquidity, the pool automatically rebalances. This means you may end up with more of the cheaper token and less of the more expensive one. Your total value may be slightly less than if you had just held both tokens separately.
Is it permanent?	No — it only becomes a real loss if you withdraw while prices are very different from when you deposited. If SIG returns to its original price, the loss disappears completely.
How to minimize it?	Provide liquidity for longer periods. Avoid withdrawing during extreme price movements. Trading fees earned from providing liquidity help offset impermanent loss over time.

Security Rules — Protect Your Investment

NEVER	share your wallet seed phrase or private key with anyone — including ALSIG team members.
ALWAYS	verify the master wallet address through two separate channels before sending funds.
NEVER	send funds based on an address received only by email without phone confirmation.
ALWAYS	use the official Uniswap website only: app.uniswap.org
ALWAYS	save your TX Hash (transaction ID) immediately after every transaction.
ALWAYS	verify all transactions independently on etherscan.io at any time.

Method Comparison at a Glance

	Method 1 — Uniswap Direct	Method 2 — Master Wallet
Technical Skill	Medium — Web3 experience needed	None — ALSIG handles everything
Fund Control	Full — you hold your LP tokens	ALSIG manages on your behalf
Speed	Immediate	Within 24 hours
Minimum	No minimum (gas fees ~\$15–30)	\$500 USDC
Transparency	Instant — view on Etherscan	Full report from ALSIG
Best For	DeFi-experienced investors	First-time or hands-off investors
