

TECHNICAL INTEGRATION ROADMAP

Partner Integration Requirements & Compliance Framework

Issued to: HIPERCAPITAL FINANCE / ELJOSD GLOBAL FINANCE LTD

Reference: ASIG-TECH-INT-2026-0608-003 | Date: June 8, 2026 | Version: 1.0

This document defines the complete technical, compliance, and operational requirements that an external partner must satisfy in order to achieve full interoperability with our settlement infrastructure. Adherence to all requirements in this document is mandatory before any live settlement transactions can be processed.

1. OUR SETTLEMENT INFRASTRUCTURE — OVERVIEW

System Name	Alshumookh Settlement Gateway v2.0
Ingestion Endpoint	POST /api/v1/payloads/ingest
Protocol	HTTPS / TLS 1.3 / API-Key Authentication
Supported Assets	USDT (ERC-20 Ethereum), USDT (TRC-20 Tron), USDT (Base)
Settlement Type	On-chain — verifiable via public blockchain explorer
Payload Format	JSON (application/json)
Finality Proof	Required: on-chain tx_hash verifiable on public explorer
Confirmation	Minimum 12 confirmations (Ethereum) / 20 confirmations (Tron)

2. INTEGRATION STEPS — COMPLETE ROADMAP

STEP 1	ASSET STANDARDIZATION — Use a Publicly Tradeable Asset
Our system settles exclusively in assets that are independently verifiable on public blockchains and freely tradeable on major exchanges. Private-chain tokens are not accepted as settlement instruments. HIPERCAPITAL FINANCE must bridge or convert value into one of the following accepted assets before initiating any settlement: ✓ USDT (ERC-20) on Ethereum Mainnet — Contract: 0xdAC17F958D2ee523a2206206994597C13D831ec7 ✓ USDT (TRC-20) on Tron Mainnet — Contract: TR7NHqjeKQxGTCi8q8ZY4pL8otSzgjLj6t ✓ USDT on Base Network (Chain ID 8453) — Contract: 0xfde4C96c8593536E31F229EA8f37b2ADa2699bb2	

Action required: If HIPERCAPITAL FINANCE intends to settle in HCEURO or HIP tokens, a certified cross-chain bridge to one of the above assets must be established and independently audited before integration can proceed. The bridge must demonstrate verifiable 1:1 conversion with a 72-hour liquidity lock-up period and third-party smart contract audit.

STEP 2

REGULATORY & COMPLIANCE DOCUMENTATION

Before technical integration begins, HIPERCAPITAL FINANCE must provide full regulatory documentation. Our compliance team will review all documents and issue a Compliance Clearance Certificate (CCC) as a prerequisite for technical onboarding.

- ✓ FCA Authorization Certificate (UK) OR equivalent financial regulator authorization in home jurisdiction — confirming authorization to conduct payment/settlement services
- ✓ Independent third-party audit of reserves backing HCEURO / HIP tokens (by a Big-4 or recognized audit firm — not self-signed proof)
- ✓ Full KYC/AML package: Certificate of Incorporation (UK + Spain + Panama), Director IDs, Beneficial Ownership disclosure
- ✓ LEI Certificate (active) — printout from GLEIF global registry: <https://www.gleif.org/>
- ✓ FINTRAC (Canada) + FinCEN (USA) MSB Registration confirmation documents
- ✓ AML/CFT Policy Document (current version)
- ✓ Sanctions screening policy and procedure documentation

Note on FCA authorization: Holding a UK Company registration number does not constitute FCA authorization. To conduct payment or settlement services involving fiat-pegged instruments in the UK, specific FCA authorization under the Financial Services and Markets Act 2000 (FSMA) is required. Please confirm your FCA registration number or equivalent regulatory authorization.

STEP 3

TECHNICAL API INTEGRATION

Once asset compliance (Step 1) and regulatory clearance (Step 2) are confirmed, HIPERCAPITAL FINANCE must integrate with our ingestion API. The following technical specifications must be met exactly:

3.1 Endpoint & Authentication

Endpoint: POST [https://\[gateway-domain\]/api/v1/payloads/ingest](https://[gateway-domain]/api/v1/payloads/ingest) Protocol: HTTPS – TLS 1.3
minimum Auth: API-Key (provided after compliance clearance) Headers: Content-Type: application/json X-API-Key: [issued-key] X-Partner-ID: [assigned-partner-id]

3.2 Required JSON Payload Structure

```
{ "messageType": "SETTLEMENT_REQUEST", "protocol": "v2.0", "reference":
"[unique-reference-id]", "sender": { "companyName": "[legal-entity-name]", "bic":
"[SWIFT-BIC or N/A]", "walletAddress": "[sending-wallet-address]", "network": "ethereum |
tron | base" }, "receiver": { "walletAddress": "[our-destination-wallet]", "network":
"ethereum | tron | base" }, "asset": { "type": "USDT", "network": "ethereum | tron | base",
"contract": "[USDT-contract-address]", "amount": [numeric-amount], "currency": "USD" },
"settlement": { "mode": "ON_CHAIN", "tx_hash": "[verified-blockchain-transaction-hash]",
"block": [block-number], "confirmations": [number] }, "compliance": { "kyc_status":
"PASSED", "aml_status": "PASSED", "sanctions_status": "CLEAR" }, "timestamp":
"[ISO-8601-UTC-timestamp]" }
```

STEP 4 ON-CHAIN SETTLEMENT PROOF REQUIREMENTS

Every settlement request must include a verifiable on-chain transaction hash (tx_hash) from a public blockchain. The transaction must be independently verifiable before our system processes the payload. Self-signed hashes, private-chain hashes, or hashes from non-public explorers are not accepted.

- ✓ tx_hash must be a confirmed transaction on Ethereum Mainnet, Tron Mainnet, or Base Network
- ✓ Transaction must be verifiable at: Etherscan.io (ETH/Base) or Tronscan.org (TRC-20)
- ✓ Minimum confirmations: 12 blocks (Ethereum), 20 blocks (Tron)
- ✓ Sending wallet must match the registered partner wallet on file
- ✓ Token transfer must be to our designated USDT receiving address (provided post-clearance)
- ✓ Transaction value must match the amount field in the JSON payload exactly

STEP 5 BRIDGE REQUIREMENT (IF SETTLING FROM HIPCF CHAIN)

If HIPERCAPITAL FINANCE wishes to convert HCEURO or HIP tokens into USDT for settlement, the following bridge infrastructure must be demonstrated before integration:

- ✓ A publicly audited smart contract bridge from HIPCF Chain (240884) to Ethereum Mainnet
- ✓ Demonstrated 1:1 EUR peg with daily on-chain attestation from an independent oracle (not internal oracle)
- ✓ Bridge liquidity of minimum 110% of intended settlement amount at time of transaction
- ✓ Bridge smart contract audited by a recognized security firm (CertiK, Trail of Bits, OpenZeppelin, or equivalent)
- ✓ Bridge contract address published and verifiable on Etherscan
- ✓ Maximum bridge processing time: 30 minutes

STEP 6 SANDBOX TESTING & CERTIFICATION

Before any live settlement, HIPERCAPITAL FINANCE must complete a mandatory sandbox testing phase using Ethereum Sepolia testnet (Chain ID 11155111). The following test scenarios must be completed and verified:

- ✓ Test 1: Successful USDT transfer on Sepolia with valid tx_hash submission

- ✓ Test 2: JSON payload validation — all required fields populated and accepted by API
- ✓ Test 3: Failed transaction handling — system correctly rejects invalid tx_hash
- ✓ Test 4: Compliance flag test — payload with AML_STATUS: PENDING correctly rejected
- ✓ Test 5: Confirmation count test — payload submitted before minimum confirmations correctly held
- ✓ All 5 tests must pass before production credentials are issued

3. COMPLIANCE REQUIREMENTS SUMMARY TABLE

Regulatory License	FCA / equivalent	Official certificate with registration number	YES
Reserve Audit	Third-party	Big-4 or recognized auditor report	YES
KYC/AML Policy	FATF standards	Policy document + implementation evidence	YES
Settlement Asset	USDT only	ERC-20 / TRC-20 / Base	YES
tx_hash	Public blockchain	Etherscan / Tronscan verifiable	YES
Bridge Audit	If using HIPCF tokens	CertiK / Trail of Bits / OpenZeppelin	IF applicable
Sandbox Testing	Sepolia testnet	All 6 test cases passed	YES
LEI (active)	GLEIF verified	GLEIF.org printout	YES

4. RECOMMENDED INTEGRATION TIMELINE

Phase 1 — Regulatory & Compliance Documentation Submission

Est: 2–4 weeks

- Submit all regulatory documents to our compliance team
- Compliance Clearance Certificate (CCC) issued upon successful review
- Estimated review time: 10–15 business days

Phase 2 — Asset & Bridge Readiness

Est: 2–6 weeks

- Establish and audit USDT bridge from HIPCF Chain (if applicable)
- Publish bridge contract on Etherscan
- Provide independent oracle price feed for HCEURO peg verification

Phase 3 — Technical API Integration & Sandbox Testing

Est: 1–2 weeks

- Receive sandbox API credentials

- Complete all 6 mandatory test scenarios on Sepolia testnet
- Technical sign-off issued by our engineering team

Phase 4 — Production Go-Live

Est: 1 week

- Production API credentials issued
- Initial settlement limit: USD 100,000 per transaction (scaling based on track record)
- Full monitoring and reconciliation dashboard access provided

5. NEXT STEPS

To initiate the integration process, please respond with confirmation that you have reviewed this roadmap and are prepared to proceed. Our Technical Integration team will then schedule an onboarding call to clarify any questions and begin the Phase 1 compliance documentation review.

Please note that no settlement transactions of any kind — test or live — can be processed until Phase 1 (Compliance Clearance Certificate) is formally issued. This policy applies without exception to all integration partners.

This document is issued for integration assessment purposes only. It does not constitute a commitment to process any transaction or establish any commercial relationship. All integration partnerships remain subject to satisfactory completion of compliance review and formal bilateral agreement.
